

HISTORICAL PROGRESSION OF DEVELOPMENT

This map depicts the historical progression of development over time by census split block group. Developed areas are classified by the decade in which the block group density reached one or more housing units per 20 acres (32+ housing units per square mile). Data prior to 2000 come from estimated housing counts in the 2000 U.S. Census of Population and Housing long form survey question "Year Structure Built", while data for 2000 come from the 100 percent count of housing units (Summary File 3A).

Note that if a house was demolished and rebuilt, only the rebuild date is reflected in the data, meaning that housing density in earlier decades may be underestimated. Housing counts are apportioned to habitable lands within block groups. Habitable lands are those owned by private parties (except private parks and reserves), tribal governments, Dept. of Defense (except U.S. Army Corps of Engineers), State Dept. of Corrections, University of California, and California State University. For more details see http://frap.cdf.ca.gov/projects/development_vegetation/index.html.

FRAP acknowledges Timothy P. Duane of the University of California, Berkeley for developing the method of creating historical housing density maps using "Year Structure Built" data. (Duane, Timothy P. 1996. Human settlement, 1850-2040. In: Sierra Nevada ecosystem project. Final report to Congress, vol. II, assessments and scientific basis for management options. Davis, CA: Centers for Water and Wildland Resources, University of California-Davis, p. 235-360).
